TriComm

[Terminal Emulation Software]

TriComm is a terminal emulation program for Windows that communicates with any serial device via ASCII. It runs on both 32-bit and 64-bit operating systems.

Supported emulation types include ANSI BBS and TVI 920. Connection settings may be preconfigured and stored as presets.

Transmit and receive indicators display the direction that data is moving.

Functions

- **Send File**
- **Receive File**
- **Manage History Logs**
- **Show Scripts**
- **Configuration**
- **Data Capture**

System Requirements

Minimum System Requirements

1 GHz Processor
